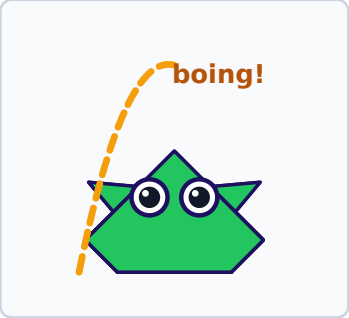
PRINT AT 100% / ACTUAL SIZE — Do NOT “fit to page”

9 Jump!



DO

Press the back edge down with one finger, then slide it off.

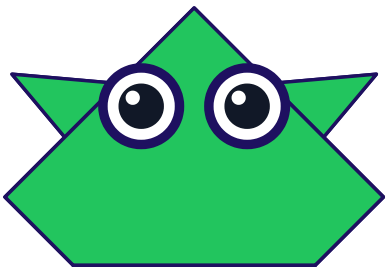
CHECK ✓

Boing! The frog hops.

TIP

Thicker paper jumps higher.

Finished!



How to make it jump

1. Put the frog on a smooth table, eyes up.
2. Put one finger on the back edge (the spring).
3. Push down a little so the spring squashes.
4. Slide your finger off the back — it springs up and hops!

It won’t jump?

- Crease the zig-zag harder (steps 6 and 7).
- Use thicker paper — an index card cut square is great.
- Press only the very back edge, then slide off fast.

Why does it jump?

Squashing the zig-zag STORES energy, like a coiled spring.

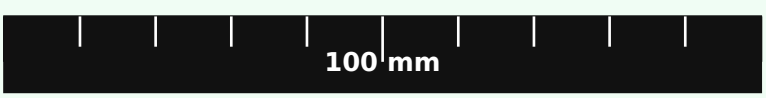
Your sliding finger is the TRIGGER — an event.

The jump is the ACTION. In code: when pressed → jump!

Frog race!

Fold two frogs and line them up. Which one jumps further?

Change ONE thing (paper, spring size) and test again — that is debugging!



Measure: this bar must be exactly 100 mm. Print at 100%, not "fit to page".
